Experience

SOFTWARE DEVELOPER | MY CAR AUCTION | MARCH. 2021 – MAY 2021

- Performed full stack engineering on the company's webapp primarily using React.
- Autonomously designed and implemented features requested by management and senior developers.
- Worked in close coordination with project managers and senior developers to meet deadlines and project expectations.
- Communicated with various third party APIs to retrieve vital information for web apps functionality.
- Created a cross-browser compatible, responsive design for the company's webapp.
- Created, executed, and logged test plans using excel templates.

SOFTWARE ENGINEER | FRACTALITY | OCT. 2020 – PRESENT

- Performs front end development functions, including designing, coding, and testing in accordance with internal protocols and procedures.
- Creates and manages the company's webapps while driving the development of new UI features.
- Optimizes web pages to ensure maximum speed and scalability and ensures web designs are adjusted for smartphone use.
- Develops features to enhance the user experience, balancing functional and aesthetic features and designs.

WEB DEVELOPER | FREELANCE | OCT. 2019 – PRESENT

- Performs research and learns new technologies needed to meet client specifications.
- Assesses website functionality and suggests product enhancements.
- Uses standard HTML/CSS practices to develop efficient website layouts and user interfaces, integrating data from back-end services and databases.
- Program cross-platforms, devices, browsers, and compatible web pages.
