## Education

**HIGH SCHOOL DIPLOMA**  
General Studies

## Skills & Abilities

- MongoDB, Express JS, React JS, Node JS
- HTML 5, CSS 3, Javascript
- JQuery, SASS
- Redux, Commerce JS
- Bootstrap, Semantic UI
- Git, SmartGit
- Front End Development
- Full Stack Development
- Ability to work with APIs
- Debugging
- Excellent Interpersonal Skills
- Prioritization & Problem Solving
- Verbal & Written Communication
- Organized & Resourceful
- Attention to Detail
- Responsive Design
- Supervision, Oversight & Accountability
- Time & Deadline Management
- Flexibility & Adaptability
- Microsoft Office Application

## Experience

**SOFTWARE ENGINEER | FRACTALITY | OCT. 2020 – PRESENT**

- Performs front end development functions, including designing, coding, and testing in accordance with internal protocols and procedures.
- Creates and manages the company's website while providing the development of new UI features.
- Releases stable features, continuous setup integration, and refactor existing systems.
- Maintains good communications with the senior developer to ensure specifications were met within deadline parameters.
- Collaborates with UI/UX developers, designers, and systems engineers to build high-quality web applications.
- Adequately confers and simplifies software development issues and ideas to management and project stakeholders to foster an understanding of technical terminology and concepts.
- Successfully develops technical expertise and knowledge of various software frameworks, systems, modules, and programming languages.
- Resolves open tickets and projects under stringent time constraints, developing and maintaining frameworks, standardized coding methodologies, and secure coding practices.
- Develops and documents API/UI integrations in coordination with Fractality services.
- Confers with clients and project stakeholders to identify and determine the structure and design of web pages.
- Obtains knowledge regarding how products, tools, and software languages interact with each other and design and develop websites according to clients' preferences and requests.
- Optimizes web pages to ensure maximum speed and scalability and ensured web designs are adjusted for smartphone use.
- Develops features to enhance the user experience, balancing functional and aesthetic features and designs.

**WEB DEVELOPER | FREELANCE | OCT. 2019 – PRESENT**

- Creates client websites and develops innovative solutions, using various web development methods and tools to enhance clients' websites' capabilities and presentation.
- Meets with prospective clients to review websites and gather the specifications for new or existing websites.
- Performs research and learns new technologies needed to meet client specifications.
- Assesses website functionality and suggests product enhancements.
- Remains current industry trends and technological advancements to implement new methods of web development to clients.
- Writes and efficient code by using effective software development practices.
- Uses standard HTML/CSS practices to develop efficient website layouts and user interfaces, integrating data from back-end services and databases.
- Monitors websites performance, then maintains, expands, and scales sites.
- Remains current on new technologies, industry trends, and web development practices and applies them to activities.
- Develops visual designs for web pages and interfaces, editing and modifying templates when required.
- Writes clean, clear, fast, and accessible friendly codes for client's websites.
- Performs routine project management tasks, including establishing timelines estimates, metrics, and budget parameters.
- Program cross-platforms, devices, browsers, and compatible web pages.
- Remains knowledge of new coding strategies, best practices, trending methodologies, and troubleshooting.

**FEE APPRAISER | HART APPRAISALS | MAR. 2017 – PRESENT**

- Assists with designated field inspections and appraisals under the direction and supervision of senior management.
- Conducts full appraisal process, including inspections, observations, descriptions, and property analysis to determine the property's present market value.
- Analyzed neighborhood data for patterns, assessed residential and non-complex commercial properties through field inspection, structural measurement, market trends, and sales analysis.
- Documents data of the property and exercises judgment in the conclusion of property value.
- Submits detailed evaluations and appraisal of findings as required by local, state, and federal regulations.
